

NAFTES AR Walker

The purpose of this application is to familiarize the ship's personnel with the equipment and the various indications on board to deal with or prevent fire damage. The individual education officer or an apartment is required to place the IMO signs on the application at visible and equipment points.

For example, the mark on a 6 kilogram foam fire extinguisher should be placed next to and in an easily visible position with the corresponding fire extinguisher. So, someone who runs the application and visits various points of the ship, wanting to know about the fire extinguisher, targets the mark around the fire extinguisher and the material shown to him by the application informs him properly.

For example, the mark on a 6 kilogram foam fire extinguisher should be placed next to and in an easily visible position with the corresponding fire extinguisher. So, someone who runs the application and visits various points of the ship, wanting to know about the fire extinguisher, targets the mark around the fire extinguisher and the material shown to him by the application informs him properly.

In the context of this application, informative material and a question of theory aimed at its self-evaluation are provided. In some cases, some audiovisual material (video) is also provided for demonstration of the use of the equipment.

Generally, the signs themselves indicate the object they want to describe. As mentioned in the example of the fire extinguisher, they have used images of real signs used on ships.

Below are the imo signs that are needed for this application.

These markings are placed at points around the device or equipment mentioned. Preferred places are bright.

Installing the application on the Microsoft Hololens Device

Before installing the application on the device, actions are required to install other software. Specifically, you must install the following:

1. Microsoft Visual Studio
2. Universal Windows Platform Plug in
3. .NET API
4. Hololens Emulator

Regarding the above actions 1-3 after you install Visual Studio, the steps 2 and 3 are selected by Visual Studio Installer and you have completed the installation.

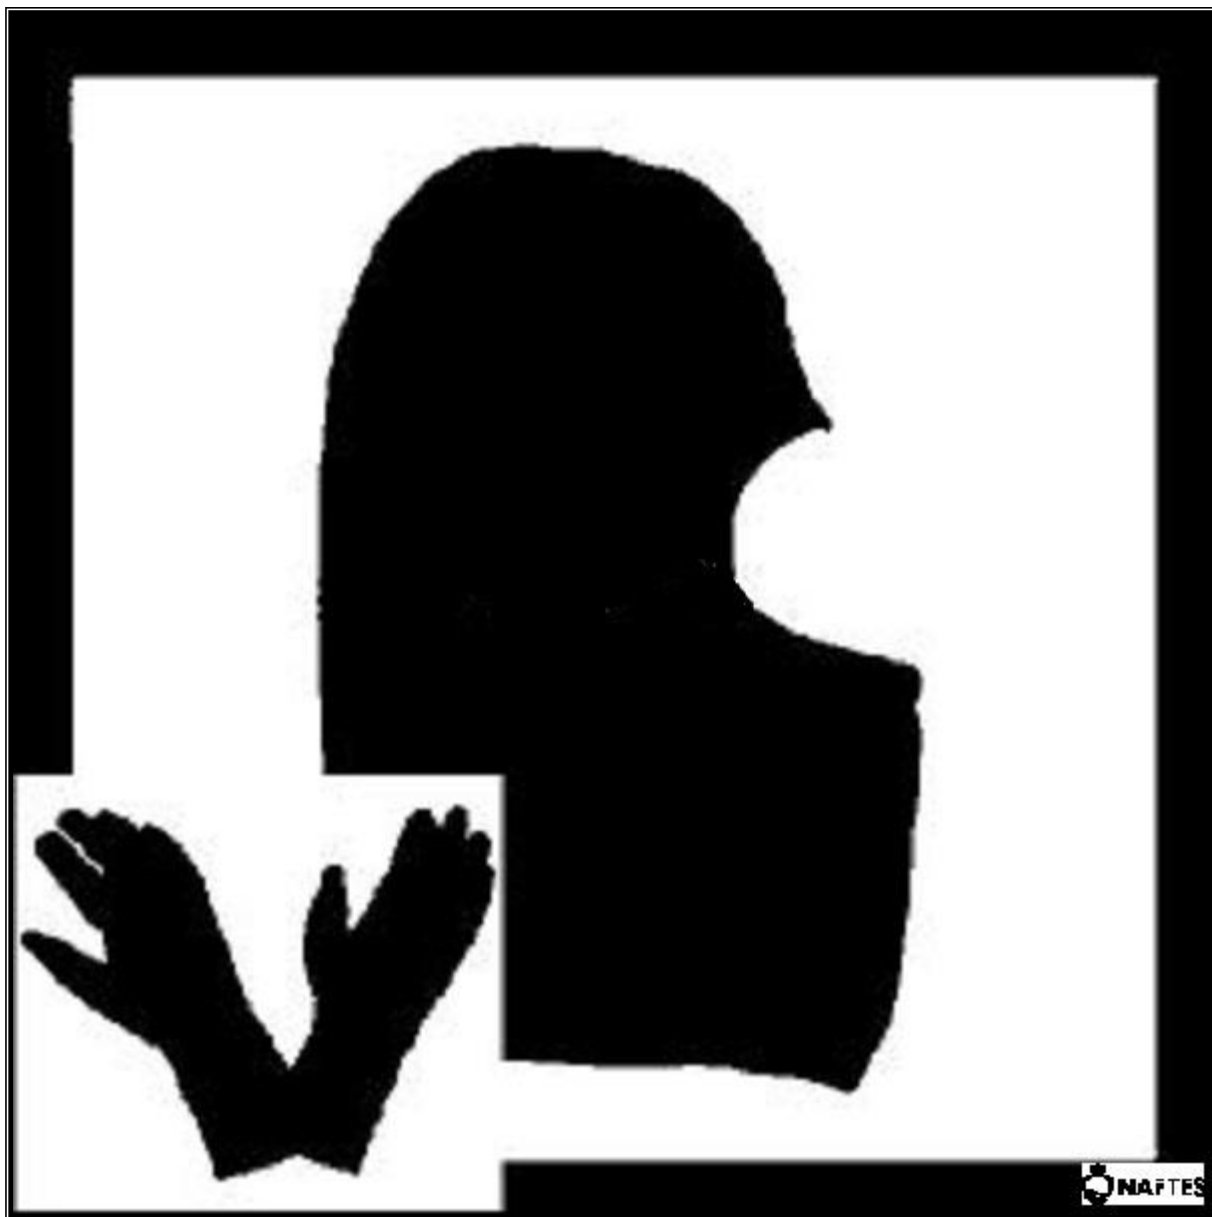

Visit for step4 <https://docs.microsoft.com/en-us/windows/mixed-reality/using-the-windows-device-portal>

In the left column above, you will also find additional information about the Microsoft tools for Microsoft Hololens.
